

## ATTACHMENT B

1. (TWICE AMENDED) A computer system, comprising:
  - a case including a first drive bay; and
  - a first drive assembly removably mounted in the first drive bay, said first drive assembly comprising:
    - a first hard drive; and
    - a first drive chassis, comprising:
      - a first rail provided along a first side of the first hard drive;
      - a second rail substantially parallel to the first rail and provided along a second side of the first hard drive opposite the first side;
      - a retaining portion adjacent a front side of the first hard drive and connecting a front end of the first rail to a front end of the second rail, the retaining portion comprising a top plate and a bottom plate;
      - a first notch provided on a first interior side of the first drive bay;
      - a handle rotatably connected to the retaining portion of the first drive chassis and between the top plate and the bottom plate, the handle having a first end and a second end distal from the first end, said handle being rotatable about an axis perpendicular to the top and bottom plates and located between the first and second ends of the handle, said handle defining a closed position in which the first end of said handle is a first distance from the front end of the first rail of the first drive assembly, and said handle defining an open position in which the handle is rotated about the axis such that the first end of the handle is a second distance from the front end of the first rail of the first drive assembly, the first distance being less than the second distance; and
      - a first latch provided on the first end of the handle and adapted to engage the first notch when the first drive assembly is inserted into the first drive bay and the handle is in the closed position;

*B*

wherein the first drive chassis does not include any portion which is adjacent to a top surface and a bottom surface of the first hard drive.

10. (AMENDED) The computer system of Claim 2, wherein the [the] second drive bay is adapted to receive a half-height hard drive.

13. (TWICE AMENDED) The computer system of Claim 1, further comprising:  
a shoulder provided on a second interior side of the first drive bay opposite the first interior side; and  
[; and]

a cam provided at the second end of the handle and adapted to abut the shoulder when the first drive assembly is inserted into the first drive bay.

21. (TWICE AMENDED) The computer system of Claim 1, further comprising, in the first rail of the first drive chassis, a light transmitting member for transmitting light from [from] a rear portion of the first drive bay to a front portion of the first hard drive.

25. (TWICE AMENDED) A hard drive mounting structure, comprising:  
a hard drive bay including:

a first notch provided on a first interior side of said hard drive bay; and

a shoulder provided on a second interior side of said hard drive bay opposite the first interior side; and

a hard drive assembly, comprising:

a hard drive;

a chassis attached to the hard drive, said chassis including a retaining portion positioned adjacent a front portion of the hard drive, the retaining portion comprising a top plate and a bottom plate;

13

a handle rotatably connected to the retaining portion between the top plate and the bottom plate, the handle having a first end and a second end distal from the first end, said handle being rotatable about an axis perpendicular to the top and bottom plates and located between the first and second ends of the handle, said handle defining a closed position in which the first end of said handle is a first distance from the chassis, and said handle defining an open position in which the handle is rotated about the axis such that the first end of the handle is a second distance from the chassis, the first distance being less than the second distance;

a first latch provided on the first end of the handle and adapted to engage the first notch when the hard drive assembly is inserted into the hard drive bay and the handle is in the closed position; and

a cam provided at the second end of the handle and adapted to abut the shoulder when the hard drive assembly is inserted into the hard drive bay.

29. (AMENDED) The hard drive mounting structure of Claim 25, wherein the chassis [body portion] does not include any portion which is adjacent to a top [portion] surface and a bottom [portion] surface of the hard drive.

33. (AMENDED) A clip for retaining expansion boards on a computer system, comprising:

a clip body;

a stabilizing projection attached to a top portion of the clip body, adapted to be mounted on a computer case such that said stabilizing projection extends to an exterior of the case and the clip body extends to an interior of the case; and

a first flange attached to a side of the clip body and adapted to abut a first expansion board, thereby preventing horizontal movement of the first expansion board.
